

Bell companies operate an "essential facility", and should NOT have to accommodate other ISP firms that wish to purchase access from them!!! De-regulation was/is a mistake!! Internet access is a UTILITY and should be governed by the people. There should only be ONE electric/gas, ONE water & ONE telecom! The wires and pipes are all the same. There is nothing that one company can offer over another. Electrons ARE electrons. Local voters should have the final say over what service they want and get!!
